

HR Process Optimization

Business Case Presentation
By
Grace Adebowale from Pod Orion

Executive Summary

Fragmented HR systems causing inefficiencies and losses.

Proposed centralized global HR solution.

Quantitative measurement provides foundation for tracking improvement progress

The purpose of this business case is to address the challenges caused by Synergy Enterprises' fragmented and decentralized HR processes. Currently, employee records are spread across multiple systems, leading to inefficiencies such as inconsistent payroll processing, limited visibility into employee performance, and poor data-driven decision-making. These challenges negatively impact operational efficiency, compliance, and the overall employee experience across Synergy's global operations.

A review of industry benchmarks and global HR maturity standards indicates that Synergy Enterprises' current HR capabilities lag behind those of leading global organizations. This gap reduces the company's ability to compete effectively with world-class FMCG organizations that rely on integrated, data-driven HR systems to support scale, speed, and workforce performance.

This business case proposes the optimization and centralization of HR processes to establish a unified view of employee data across all regions. By implementing a standardized HR system, Synergy Enterprises aims to improve payroll accuracy by 30 to 40%, enhance performance management by about 20 to 30%, support strategic workforce planning, and deliver a standardized employee experience globally from 50% to about 70%.

01.

Decentralized employee data

Employee records are stored across multiple regional systems, resulting in the absence of a single source of truth. This increase the risk of duplicate employee records.

02.

Inefficient HR operations

This can lead to payroll inconsistencies, policy non-compliance, and potential financial losses for the organization.

03.

Compliance and data privacy risks

Inadequate data governance and security controls expose the organization to potential data breaches, legal penalties, reputational damage, and financial losses.

04.

Lack of global HR insights

Inconsistent and incomplete data prevent Synergy Enterprises from generating reliable global workforce reports.

05.

Inconsistent employee experience

Variations in HR processes across regions result in unequal access to performance evaluations, promotions, and recognition. This inconsistency can reduce employee engagement, motivation, and retention, weakening the company's global employer brand.

06.

High IT maintenance costs

Maintaining multiple HR systems across regions requires significant IT resources and budget, increasing operational costs and limiting the organization's ability to invest in strategic HR initiatives.

Problem Statement

Synergy Enterprises

Proposed Solution & Review of Options

Centralized HR processes

Standardized payroll, onboarding, and performance management.
Reduced manual processes.
Improved operational control.

Consistent global employee experience

Fair and transparent performance evaluations.
Standard global policies with local flexibility.
Improved engagement and retention.

Enhanced HR analytics & reporting

Provide leadership with real-time insights into workforce trends, performance, attrition, and skills gaps, which support strategic workforce planning and data-driven decision-making.

Unified global staff view

Single source of truth for all employees.
Payroll, performance, and training visibility.
Reduced duplication and improved compliance.

SMART Business Objectives

30–40% HR efficiency improvement

This improvement is expected to contribute to a reduction in HR-related operational costs and inefficiencies, supporting annual savings of approximately **\$200,000** through improved productivity and reduced administrative effort.

01.

02.

50% payroll error reduction

This objective directly supports the elimination of payroll-related financial losses, contributing significantly toward recovering the current **\$1 million annual loss** caused by errors and duplicate payments.

Unified employee database within 12 months

A unified database enables early identification of duplicate records and inaccurate employee data, supporting the initial **20% loss reduction (\$200,000 annually)** realized during the first rollout phase.

03.

04.

20–25% improvement in employee engagement, performance visibility, and skills development

Clear performance insights and targeted training drive higher engagement, stronger internal mobility, and improved workforce capability.

Financial Analysis

This slide shows how we move from a \$1 million annual loss today, to early cost recovery within the first 8 months, and ultimately to a net annual benefit of \$1.2 million once the solution is fully implemented.

Current loss: \$1M annually

Due to fragmented HR systems, including payroll errors, duplicate employee records, inefficient manual processes, and high administrative and IT overhead.

Phase 1: 20% loss reduction

This focuses on centralizing employee data and establishing a unified global staff view, Synergy Enterprises is expected to identify and eliminate approximately 20% of duplicate employee records.

Full implementation: \$1.2M annual benefit

Additional efficiencies will be achieved through standardized HR processes, improved payroll accuracy, enhanced data governance, and advanced HR analytics.

Project cost: \$500k

- Total project cost: **\$500,000**
- HR platform (Year 1): **\$100,000**
- Implementation & rollout: **\$400,000**
- Expected annual benefit: **\$1.2M**
- Payback period: **~5 months**

Payback period: ~5 months after full rollout

ROI: ~140% in first year

ROI & Payback

This initiative requires a total investment of \$500,000 spread over two years. Once fully implemented, the solution delivers annual financial benefits of approximately \$1.2 million, resulting in a payback period of about five months and an estimated 140% ROI within the first year. Beyond the numbers, the solution also strengthens compliance, improves employee experience, and reduces operational risk.

Synergy Enterprises

Implementation Plan (24 Months) – 5 Phases

Design & build (Months 1–5)

This phase will focus on gathering detailed business and system requirements, designing the target HR architecture, and configuring the centralized HR platform.

Core HR processes (Months 9–15)

Standardized payroll, recruitment, onboarding, performance management, and employee administration implemented globally.

Stabilization (Months 21–24)

The final phase will focus on system stabilization, user training, change management, and continuous improvement.

Initial Data rollout (Months 6–8)

The first rollout will focus on migrating and centralizing employee data into a single global system.

Analytics & optimization (Months 16–20)

Advanced HR analytics and reporting capabilities will be introduced to support workforce planning, performance tracking, and talent development.

Risk Analysis & Mitigation

Data Migration and Data Quality

Risk: Migrating employee data from multiple legacy systems into a single centralized platform may result in data inconsistencies, duplication, or loss.

And some employees

Mitigation: Conduct comprehensive data audits and cleansing activities before migration, implement phased data migration, and perform validation checks to ensure data accuracy and integrity.

User Resistance and Change Management Risk

Risk: Employees and HR teams across regions may resist adopting the new system due to unfamiliar processes or fear of change.

Mitigation: Implement a structured change management and communication plan, provide role-based training, and involve key regional stakeholders early to encourage adoption and ownership.

Integration and Technical Complexity Risk

Risk: Integrating the new HR system with existing payroll, finance, and reporting systems may introduce technical challenges.

Mitigation: Conduct early integration assessments, use standardized APIs, and adopt a phased integration approach with thorough testing before full deployment.

Compliance and Data Privacy Risk

Risk: Managing employee data across multiple countries increases the risk of non-compliance with labor laws and data protection regulations.

Mitigation: Establish a standardized HR data governance framework, enforce role-based access controls, and ensure compliance requirements are incorporated into system design and configuration

Risk Analysis & Mitigation

Budget and Timeline Overrun Risk

Risk: The complexity of a global rollout may lead to increased costs or delays beyond the planned 24-month timeline.

Mitigation: Use a phased implementation approach, maintain clear scope control, track progress through defined milestones, and conduct regular project reviews to ensure alignment with budget and schedule.

Inconsistent Regional Adoption Risk

Risk: Variations in regional readiness or regulatory requirements may result in uneven system adoption.

Mitigation: Allow controlled regional flexibility within global standards, prioritize high-impact regions during rollout, and continuously monitor adoption metrics to address gaps promptly.

SDLC Methodology Selection & Justification

Why Hybrid Agile?

- Reduces implementation risk
- Enables early value delivery
- Ensures adaptability across regions over the 24-month rollout

Waterfall components:

- Requirements definition
- System & data governance design
- Compliance and security controls.

Agile components

- Iterative system configuration
- Phased rollout using sprints
- Continuous improvement and user feedback

Selected Methodology:

Hybrid Agile :

- It combines Waterfall and Agile to suit a large, global HR transformation
- Supports regulatory compliance, governance, and flexibility.

Given the size and regulatory complexity of this project, a Hybrid Agile SDLC was selected. Waterfall is used upfront for requirements, governance, and compliance, while Agile supports iterative delivery, phased rollout, and continuous improvement. This approach balances control with flexibility, reduces risk, and ensures early business value throughout the 24-month implementation.

What solution will you recommend for this Fast-moving consumer goods conglomerate?

A centralized, cloud-based global HR solution should be implemented to unify employee data and standardize HR processes across regions. This solution will reduce inefficiencies, improve payroll accuracy, strengthen compliance, and provide real-time workforce insights. For an FMCG (Fast-Moving Consumer Goods) conglomerate, the solution supports scalability, speed, and consistent operations across global markets.

Conclusion & Recommendation

This business case recommends implementing a centralized global HR solution with a phased 24-month rollout and a Hybrid Agile SDLC approach.

The proposed solution delivers measurable financial value, with an estimated annual benefit of \$1.2 million, a payback period of approximately five months after implementation, and a projected 140% return on investment within the first year of full operation.

In addition to financial gains, the solution strengthens compliance, improves employee experience, enhances workforce analytics, and supports long-term scalability.

It is therefore recommended that Synergy Enterprises' leadership approve and proceed with the proposed HR transformation initiative.

THANK YOU
